

Solvy Water Soluble

How Clear and Defined is your Embroidery on Towels and Raised fabrics?

Water soluble topping such as **Solvy** can sometimes be referred to as a second skin. Once a sandwich of Solvy, fabric and backing is hooped and the embroidery is stitched, it **prevents** the stitches from **sinking** into the garment and losing the design or lettering's definition. It is **clear and precise** compared to if the embroidery was stitched directly onto a garment with high pile or texture such as **toweling, cordorouy knit, wool, fleece** etc...

Solvy is **ideal** to use when embroidering **small lettering on knit** shirts to help them stand out and sit on top of the garment making it crisp and clear. Fleece is also a popular embroidered garments for winter months.

Here's How to Use It.

Step1. Hoop the item you are embroidering up with Backing underneath(as normal), Fabric in the middle ,and **SOLVY** on top(to keep pile down).

Step.2 Embroider your Design.

Step 3. Remove excess solvy and Backing once the design is finished.

Step.4 If you still see remnants of the excess **SOLVY** try using a Spray bottle,Damp Cloth,or a Garment Steamer !

REMEMBER ! Always keep your SOLVY in a plastic bag !

Our Solvy Range is Available in the following sizes.

Product Codes :

Solvy 3010 (30cm x 10mt) 25 micron

Solvy 3050 (30cm x 50mt) 25 micron

Solvy 10200 (10cm x 200mt) 25 micron

Solvy 50200 (50cm x 200mt) 25 micron

Solvy 100200 (100cm x 200mt) 25 micron
